HILL'S EVERGREENS

Home Trees Ever Beautiful

1922

Our Guarantee

We guarantee that all goods purchased from us will reach you safely and in good condition; be found true to name and prove entirely satisfactory, or we cheerfully refund money paid.

THE D. HILL NURSERY CO., Inc.

D. Hill
President

DUDEE STATE BANK
DUNDEE, ILLINOIS
FOUNDED 1864

Elgin National Bank

CAPITAL \$ 100,000.00
EDWARD SCHMIDT, President
WILL HUIBHEAD, Vice President
C. F. O'HARA, Cashier
C. A. DAVIS, Asst. Cashier
ELGIN, ILL.

TO WHOM IT MAY CONCERN:

I am glad to recommend the D. Hill Nursery Company Inc. to anyone desiring to purchase evergreens etc. I have known Mr. David Hill for over thirty years, and his sons all their lives, and all have the highest reputation of square dealing.

By careful attention to the quality of their stock, they have gradually built up an immense big business, and are shipping stock to all parts of the world.

F. W. P. President,

TO WHOM IT MAY CONCERN:

D. Hill, and successor, The D. Hill Nursery Co. Inc., of Dundee, Ills., have for many years been valued depositors and customers of this Bank.

They have at Dundee one of the largest evergreen nurseries in the world and the high quality of their goods has brought them a very large business.

They have the highest reputation for honesty and fair dealing and we cheerfully recommend them to anyone desiring goods in their line.

THE ELGIN NATIONAL BANK,

C. F. O'Hara
Cashier.

What Others Say

Your Evergreens are of very excellent grade and all doing well. Will need more next year.

M. W. MIX,
Mishawaka, Ind.

I want to take this opportunity of complimenting you on the very splendid manner in which the Evergreens were burlapped and placed in car. Out of the entire number of very nearly 500 trees only one was damaged.

GUSTAVE PABST,
Milwaukee, Wis.

Evergreens just received. The packing and care you take is worth a good deal to those who want the best in nursery goods.

LOUIS D. TRUDEAU,
Woburn, Mass.

The Evergreens arrived in first-class condition a few days ago, and I am pleased with them.

G. H. SPENCER,
Duluth, Minn.

Permit me to congratulate you upon the excellent condition in which I received the last shipment of Evergreens. I am very much pleased.

MARVIN B. POOL,
Midlothian, Ill.

All the trees which we bought from your nursery have done exceedingly well. Be assured that when we need anything for the golf course, I shall consult you.

CHAIRMAN, GROUNDS COMMITTEE,
Calumet Country Club,
Chicago, Illinois

A Personal Greeting

To Old Friends and New:
Each year I realize more
and more that any catalog
can give no more than a
suggestion of the grandeur
of Evergreens, as I have
learned to know them
through the association
of a lifetime.

When you know Evergreens, you feel in their presence the hush of the vast forest—you see the silent sentinels, Evergreens, typifying permanency—defying time and the elements.

The Evergreen is something nature has given man to typify eternal promise—the promise that Spring shall always come again. In snowy Winter, it gives the only note of comforting color in the bleak landscape. In summer it adds serenity to the riot of colors that the smiling sun coaxes forth from nature.

An Evergreen is like an old friend—the stress of years—the strife of a lifetime only make richer his noble character. So is a home surrounded by Evergreens like a man with many true friends. As the poet says:

"A toss of my cap to the Cedars!
The lovingest trees that be,
The time tides roll and the seasons veer
Yet tender, sweeter, year by year,
My Cedars are true to me."

In the storehouse of nature are many things beyond your power to possess, but any lover of nature can surround his home with Evergreens. In their manner is grace—in their color is rest—in their presence is inspiration—their influence is perpetual. An Evergreen is truly a tree with a great and noble character.

D. Hill

Hill's Evergreens

In order to provide Specimen Evergreens in uniform quality that come up to the Hill standard, a process of careful individual selection is rigidly followed. When Hill Evergreens are four or five years old, we go through our immense blocks and select out the very best trees of uniform color, symmetry and habit of growth to transplant and grow into individual specimens. Out of our blocks of thousands, only a few hundred Evergreens are selected that come up to our *specimen standards*. This accounts for the perfection of each individual Hill Specimen Evergreen.

Transplanting and Root-Pruning

Frequent transplanting and root-pruning gives Hill Specimen Evergreens masses of fine, fibrous feeding roots. This, together with annual shearing, results in heavy, bushy, symmetrical tops.

Hill's Evergreens Are Balled and Burlapped and Hand Dug

Every Hill Specimen Evergreen is carefully hand dug, leaving a large earth ball about the roots, which is securely burlapped. Our soil contains just enough clay so that earth ball remains intact. This method of digging leaves the roots undisturbed in a ball of rich nursery soil, and insures the success of Hill Specimen Evergreens in the hands of the planter. As additional protection, each earth ball is securely burlapped.

Careful Packing

Seeing that your Evergreens are carefully packed is of equal importance. Our over sixty-five years' expert knowledge in properly packing Evergreens for long distance shipments, is your guarantee of safe arrival.

Landscape Service

Should you desire the service of a competent Landscape Architect to assist you in the proper arrangement of your trees, we will gladly put you in touch with some one in your immediate locality. We are in direct communication with all the leading Landscape Architects and can easily refer you to some one best qualified to handle your problems.

A bird's-eye view of the Hill Nursery.

Hill's Evergreens
Balled and Burlapped

Specimen Evergreens in nursery row.

Hemlock (*Abies Tsuga Canadensis*). Winter's winds and snows hold no terrors for our Northern Hemlock.
We propagate only the hardy northern strain.

Hemlock

(*Abies Tsuga Canadensis*)

A Graceful Native Conifer

The Hemlock is native to a wide range in America, extending from Quebec in the North to Wisconsin on the West and Northern Georgia and Alabama on its Southern extremities. Usually occurs in company with other trees, exclusive tracts of Hemlock being quite scarce. The natural habit is very tall, 50 to 60 feet, much less in cultivation.

By careful shearing of the branchlets in the nursery we produce trees of distinct merit, compact and symmetrical in growth. Does well in moist soil, partially protected from cutting winds.

In the past many Hemlocks in American Nurseries were imported from Europe, where they were propagated from seed collected in America in the Southern states, Carolinas, Tennessee, etc. When these trees were shipped to America to colder climates they produced rather inferior types of trees which often winter scalded, turned a ragged brown or killed outright. The value of our strain of Hemlock is based on seed selection from Northern sources only, insuring trees of hardiness and free, graceful, upright growth.

The following is taken from *Woods and Forests*: "Large groves of Hemlocks growing on the hill slopes present a noble appearance, affording long vistas through the shady groves. The softened light invests the interior of these forests with an air of solemn mystery, whilst the even spread of the mossy carpet beneath affords appreciable relief to the foot-sore hunter. The human voice sounds as if confined within spacious and lofty halls."

Price, Extra Selected Specimens, Balled and Burlapped

The Hemlock makes beautiful hedges, on account of its density of growth and ease of shearing.
For other hedge Evergreens see page 54.

Colorado Douglas Fir

(*Abies Douglassi*)

Douglas Fir was originally discovered by Archibald Menzies, 1792, and rediscovered by David Douglas, the eminent Scotch explorer in 1827, and introduced by him in the following year. It was shortly after named for him to commemorate his memory.

It is an upright, symmetrical-branched grower, reaching 60 feet or more in height; branches spreading 12 to 18 feet in old trees. Grows rapidly and thrives well in almost any situation. A tree that is widely known and appreciated in both Europe and America.

Our plants are the type from Northern Colorado, the seed being collected in deep gorges of high altitudes, where the blue and silvery foliage is characteristic, being compact and symmetrical in growth, with rather short needles, in contrast to Southern Colorado and New Mexico type which are of doubtful hardiness, irregular and open growing. By personally supervising the collection of seed we grow only the genuine Colorado type.

Concolor Fir

(*Abies Concolor*)

Queen of the Firs

More than 30 years ago, Mr. D. Hill, while on a visit to the Colorado Rockies, was keenly impressed with the distinctive attractiveness of the Concolor Fir. Chiefly through his efforts this beautiful Fir has been introduced to American planters. Concolor Fir is also known as Silver Fir and White Fir.

We are careful to obtain our seed supply from Northern Colorado, producing trees of absolute hardiness with striking foliage varying in color from light green to deep soft blue with medium short needles. The new growth in spring is of silvery whiteness, very beautiful. Long-lived, growing 60 to 80 feet high, thriving well under all conditions. See picture on page 10.

The strain of Concolor Fir from New Mexico, where seed is cheap and always abundant, is much inferior, inclined to winter kill, and is of rather straggly open appearance. Our trees are guaranteed the true Colorado type, excellent in form and color.

Price, Extra Selected Specimens, Balled and Burlapped

Balsam Fir brings the odor of the woods to your door.

Balsam Fir

(*Abies Balsamea*)

Most Fragrant of All Evergreens

The characteristic odor of the northern woods is chiefly if not solely due to this Fir. The foliage is very fragrant, young growths often being used for making the favorite "Balsam Pillows." Makes a handsome lawn specimen, rarely growing over 30 to 40 feet high.

Native to the North Central and North Eastern States extending throughout the most of Canada. Thrives best where there is an abundance of water at the roots.

Price, Extra Selected Specimens, Balled and Burlapped

Colorado Douglas Fir (*Abies Douglassi*). At home in almost any situation. A beautiful, rapid grower.

Only Evergreen trees can add such charm and dignity to your home. These magnificent specimens are Concolor Fir (*Abies Concolor*). See page 8.

Hill's Silver Juniper

(*Juniperus Scopulorum*)

A Remarkable New Introduction

BY D. HILL

The merits of Hill's Silver Juniper are self-apparent to anyone who has seen the tree. It embodies all that could be desired in a narrow pyramidal very close growing Juniper with the increased desirability of exquisite silvery blue coloring, equal to the Blue Spruce. The berries, borne abundantly, are smooth and clear blue in color, due to a whitish bloom over the blackish skin.

The original trees discovered in the Rocky Mountains of Colorado were greatly admired by Mr. D. Hill and through his persistent and painstaking efforts in personally exploring seed sources, trees were propagated in our nursery and then introduced to American planters.

Several years' experimenting and conclusively that it is absolutely hardy in the North and well adapted for South-ern conditions. Many testimonials confirm its worth. The group shown below are among a number of specimens in our nursery, where we have thoroughly tested it for several years. Two additional distinct types are also being propagated.

We have some choice trees to offer—1½ to 2 feet, burlapped, at \$8.00 each, \$75.00 per 10. Secure choice trees now. You will find them extremely and attractive.

testing in various parts of the country have proved hardy in the North and well adapted for South-ern conditions. Many testimonials confirm its worth. The group shown below are among a number of specimens in our nursery, where we have thoroughly tested it for several years. Two additional distinct types are also being propagated.

to offer—1½ to 2 feet, burlapped, at \$8.00 each, \$75.00 per 10. Secure choice trees now. You will find them extremely and attractive.

Red Cedar (*Juniperus Virginiana*). Very hardy. Dark green to bluish foliage.

Red Cedar

(*Juniperus Virginiana*)

The Dean of All Junipers

Our stock is the hardy northern strain. Pyramidal habit, dark green to bluish foliage. It is one of the most useful and characteristic trees of our American landscapes, rivaling the Italian Cypress in beauty. Adapted for planting in all sections of the country. The propagation of this valuable Conifer has been a specialty with us for many years, and we exercise great care in the selection of our strain of seed. It is interesting to note that from this tree various varieties of Junipers are propagated by grafting, including *Juniperus Glauca*, *Counarti*, *Schotti*, and *Elegantissima Lee*, mentioned in the following pages.

The foliage and wood emits that pleasing, spicy, fragrant, cedrus odor. In season the tree is covered with bright blue and silver berries. Red Cedar can also be trimmed into any shape, excellent for hedges and topiary work. (See page 51.)

ODE TO THE CEDARS

Oh, here's a glee to the cedars,
Our stanch old friends and true!
What boots the snow, when wild winds blow;
For never a change do the cedars know
All the long years through.

Juniper Glauca (*Juniperus Glauca*). Upright—symmetrical, fine blue color.

Juniper Glauca

(*Juniperus Glauca*)

A Distinct Blue Variety

In this variety, the whole of young growths are of almost silvery whiteness, which changes to pale glaucous green in winter. The Juniper Glauca is foremost among the interesting group of Junipers that have been developed from the Juniperus Virginiana (Red Cedar). We constantly strive to improve our strain by careful selection and reproduce only the best types, most true to form, color, compactness and habits of growth. In grafting this tree, we are careful to use for understocks only the dependable Red Cedar, insuring hardiness and longevity.

Juniper Glauca never grows very large, not over 15 to 20 feet, and it can be kept even smaller if desired. Formerly the supply of stock came from Europe, and while it is not a common tree, we have a large and interesting stock.

4 to 5 feet xxxx.	B&B	16.50	160.00

Juniper Counarti

(*Juniperus Counarti*)

Handsome, Dark Green

A rather recent introduction from Europe. Foliage beautiful deep green, quite heavy. The blue and silver colored berries make it unusually attractive. Height 15 to 20 feet. Stands trimming well, making a good variety for formal plantings. It is a good companion tree to Red Cedar, Juniper Glauca and Juniper Schotti.

Through many years of careful selection of the best types, our trees are of extra fine color and form. Each tree is carefully trimmed each season, producing beautiful, symmetrical, compact trees, far superior to overgrown untrimmed specimens.

Attract the Song Birds

It has been observed that birds will travel for miles to make their home in the shelter of Evergreens, which form a substantial shelter and nesting place, especially those who stay for the winter months. Among the Evergreens there are several good varieties the fruits of which make excellent food for birds. American Yew, Japanese Yew, Red Cedar, Juniper Glauca, Juniper Counarti and Hill's Silver Juniper are well supplied with berries.

An added charm of Evergreens is revealed in their widely contrasting growing habits. Red Cedar (page 13) and Pyramidal Arbor Vitae (page 45) are the prominent trees in this planting.

Lee's Golden Juniper

(*Juniperus Elegentissima Lee*)

Golden Tipped

A graceful, upright variety, with slightly drooping tendencies, reaching about 10 to 15 feet. Each season the new growth is a rich, creamy golden color, inner branches being green. This is one of the most beautiful Junipers. Absolutely hardy, and a good grower.

Lee's Golden Juniper is propagated by grafting on Red Cedar (*Juniperus Virginiana*). By selecting our scions from only those trees of superior color and form, we produce a much improved strain, exquisite in coloring and unusual in its graceful growth.

Price, Extra Selected Specimens, Balled and Burlapped

Juniper Schotti

(*Juniperus Schotti*)

Attractive Light Green

The origin of this tree is not definitely established although it is thought to have originated in one of the European nurseries some years ago.

Its general appearance is like *Juniperus Counarti*, shown on page 14. It is distinguished, however, by its bright, rather yellowish-green foliage. Very hardy. Growing 15 to 20 feet and stands almost any amount of trimming. We have an excellent stock of choice trees of unusually fine form and color.

Lee's Golden Juniper

Juniperus Pyramidalis

Narrow—Spire-like

A variety of distinct merit noticed by A. H. Hill on a visit to the Johannes Von Ehren nurseries, near Berlin, Germany, in 1908, and introduced into the United States the following spring when we imported all the available stock, 100 trees, 3 feet, which forms the basis of our propagating stock. It is absolutely hardy and a good grower, being narrow, very pyramidal, with good, dark green foliage.

The correct arrangement—tall growers in back—low growers in front. You will find page 50 of interest in selecting the right varieties according to size at maturity.

Such trees become a permanent part of the home environment—as much cherished as the home itself.

Juniperus Canadensis

(*Juniperus Communis*) (*J. Communis Depressa*)

Excellent Ground Cover

The well known, valuable, many-stemmed Dwarf Juniper. Rarely exceeds 2 feet in height; good form of Juniper for ground cover. It is at home on sandy or gravelly hillsides fully exposed to the sun, where single plants often reach 15 feet or more in diameter, but can be trimmed to any size wanted.

Is sometimes catalogued as *Juniperus Communis* which is erroneous. The name *Juniperus Communis Depressa* is also applied, which is a synonym. Grows native in various sections of the country, but we obtain our seed from Northern Wisconsin, which is the superior type. Foliage is gray green, very dense.

Price, Extra Selected Specimens, Balled and Burlapped

Juniperus Canadensis—we grow both the green and golden type.

Japanese Trailing Juniper

(*Juniperus Chinensis Procumbens*)

8 to 12 Inches High

The following description is taken from Vol. 2, No. 16, Bulletin, of famous Arnold Arboretum, Harvard University: "This is the best known of the prostrate Junipers which Japan has sent to the gardens of the west. It is a plant with wide-spreading procumbent stems, blue-green, sharply pointed leaves marked on the upper surface by two white lines. The fruit is not known. It is said to have been introduced into Great Britain before the middle of last century, but was soon lost from European gardens until it was re-introduced in 1893. It is perfectly hardy."

There is considerable variance among varieties offered as Procumbens, but we are careful to propagate only from the true strain consisting of hardy, compact growing plants from trees we imported direct from Japan. Reaches from 10 to 15 feet in diameter, but can be kept smaller by trimming.

Price, Extra Selected Specimens, Balled and Burlapped		Each	10
1 to 1½ feet xxx*	B&B†	\$ 8.00	\$75.00
1½ to 2 feet xxx.	B&B	10.00	95.00

Juniperus Sabina Horizontalis

Trailing or Creeping Form

An interesting type of Sabina produced from seed we procured from Russia for the first time in 1916, of absolute hardiness. Three distinct types are noticeable, some procumbent, others semi-dwarf, having interesting variations in foliage. Possesses wonderful possibilities and should be given a trial by every one interested in Conifer culture. Our stock is limited.

Price, Extra Selected Specimens, Balled and Burlapped		Each	10

5 of same variety and size at 10 rate. *Each x indicates one transplanting. †B&B signifies Balled and Burlapped.			

Juniperus Canadensis is at home on sandy or gravelly hillsides where single plants often reach 15 feet or more in diameter.

Juniperus Sabina Tamariscifolia

Another good creeper. The foliage is fine in texture; average height in one foot, with a spread of 6 to 8 feet when full grown. Sometimes called Gray Carpet Juniper, and the name Tamarisk Leaved Juniper is also applied to it. It is said to occur wild in Sicily, Greece and other places. Our stock is propagated from true stock from the Kew Gardens in England.

A very vigorous grower, forming a compact and perfect mat of bluish or gray-green. Grows very dense and never changes in color.

Price, Extra Selected Specimens, Balled and Burlapped

		Each	10
1 to 1½ feet xxx*	B&B†	\$ 8.00	\$75.00

Japanese Gardens

On account of the increased interest in Japanese Rockery Gardens and Tea Gardens, as shown by numerous inquiries that have come to us, we established, several years ago, a department of this kind for the accommodation of our customers, in charge of the talented Japanese landscape architect, Mr. T. R. Otsuka. We will gladly furnish detailed information to anyone interested.

Juniperus Tamariscifolia—American Yew (*Taxus Canadensis*) in background.

Hill's Waukegan Juniper

(*Juniperus Sabina Prostrata*)

Most Striking of All Creeping Junipers Foliage Silvery Blue

We have tested 10 or 12 varieties of Creeping Junipers here in the nursery for a number of years (many of which we have discarded), and have experimented in type selection, propagating only those forms of superior growth. The Hill's Waukegan Juniper (*Juniperus Sabina Prostrata*) which we have developed is the result of constant watching and testing at all seasons of the year, and the selection of plants having the most desirable characteristics, from which to take cuttings for propagating. The tree is a close, compact grower, having beautiful, silvery blue foliage, very striking.

In the fall after the first frosts the foliage changes to a rich purple hue, a feature not found in other Creeping Junipers.

Those who are seeking the newest and most interesting introductions in Evergreens will be delighted with this new Juniper. We are propagating it extensively, but now have only the smaller plants (not balled and burlapped). To anyone who wishes to secure a few plants for trial, we will gladly send small trees 6 to 8 inches, once transplanted, guaranteed the genuine blue type, at \$1.00 each. Just as soon as possible we will have this tree in good quantity in sizeable plants.

It has attracted a great deal of attention here in the nursery, as we have had specimens growing on our grounds for a number of years, having tested it thoroughly before offering it to our customers. We can safely say that it is without doubt the most interesting and unusual form of Creeping Juniper that can be secured anywhere.

Prostrate or Creeping Junipers.

Juniperus Pfitzeriana

A Fine, New, Hardy Juniper

"The handsomest of the Juniperus Chinensis varieties, the Pfitzeriana, which grows in the form of a low broad pyramid, is the most satisfactory of all Junipers in this climate. Fortunately it can now be found in American Nurseries." ARNOLD ARBORETUM.

It was originated some years ago in Pfitzer's Nursery, near Berlin, Germany. Introduced by Ludwig Spaeth, famous German nurseryman, into general cultivation, from whom we obtained our original plants for propagating. A wide, plumose and graceful Evergreen of healthy blue-green foliage. Branches grow horizontal from the stem, forming a flat, spreading top. Height 6 to 10 feet. Specimens shown on page 23.

Price, Extra Selected Specimens, Balled and Burlapped

Juniperus Virginialis Globosa

Gold and Green Globes

It is perfectly round—very dense in growth—its many short branchlets covered with soft foliage of light green, dark green and gold. Excellent for planting among perennials, in rock gardens, Japanese gardens and in situations requiring Evergreens that will remain small. The trees we offer were imported direct from Japan and have been growing in our nursery several years.

Savin Juniper

(*Juniperus Sabina*)

Native of Central and Southern Europe. Prefers dry, rocky, sunny slopes. Very hardy, growing from 4,000 to 10,000 feet above sea level. The Savin Juniper was introduced into British gardens at a very early date, as it is mentioned in Turner's "Names of Herbes," published in 1548. Color is a dark green. Height, 5 to 8 feet or less, having numerous semi-erect spreading branches.

Price, Extra Selected Specimens, Balled and Burlapped

Savin Juniper (*Juniperus Sabina*)

An unusual but fascinating treatment—Juniperus Pfitzeriana punctuated with Pyramidal Arbor Vitae (*Thuja Pyramidalis*).

American White Spruce

(*Picea Alba*)

Beautiful Native Variety

Described by Bailey, the eminent horticulturist, as: "A native of the northern parts of America and justly thought to be one of our best Evergreens. A compact and upright grower of great longevity. Trees over fifty years old remain well branched at bottom, retain their pyramidal form and annually make an upward growth. It will grow on a great variety of soils, bear crowding well and also stand severe trimming. Being a native of cold climates it grows most successfully when planted north of a line from Philadelphia to St. Louis." Foliage is light green with slightly bluish tinge.

The best types prevail throughout Northern Wisconsin, from where our seed is gathered from carefully selected grounds.

White Spruce (*Picea Alba*)

You can duplicate this planting with Dwarf Mountain Pine, Juniper Glauca, Juniper Pfitzeriana, American Arbor Vitae and Woodward's Globe Arbor Vitae at a cost of only \$75 to \$100.
Think of what this planting would mean around your home.

Here is a suggestion that can well be copied for parkway plantings. Austrian Pine surrounded by Dwarf Mountain Pine and Savin Junipers were used in this instance.

Colorado Blue Spruce

(*Picea Pungens Glauca*)

Glistening, Silvery Blue in Color

This handsome Spruce was discovered on Pikes Peak by Dr. Parry in 1862. Other trees there are of almost every imaginable form and color, but here is truly the culmination of nature's highest effort to produce the beautiful. Picture in your mind a perfectly shaped tree with an abundance of heavy foliage of a rich glistening blue, which flashes and sparkles in the sunlight, and you can form only a faint idea of the magnificent beauty of this truly marvelous tree.

The glory of the Blue Spruce is in its foliage, which is an intense steel-blue. It has created a sensation throughout the United States and Europe and is indeed a triumph in Evergreen growing.

Hill's Blue Spruce are selected specimens grown from seed collected from the very bluest of the native Colorado Blue Spruce. In this way is produced blue trees of the finest and brightest color possible.

For a great many years we have been headquarters for Blue Spruce and always maintain a large and interesting stock.

Colorado Blue Spruce (*Picea Pungens Glauca*)

"Colorado Blue Spruce has a regal grace, stern and unyielding in outline, like an oak among the Conifers. There is probably no state in the Union where it will not thrive. It might be monotonous to have the entire grounds planted with them, but every lawn or yard should have at least one or two to give, with its unique coloring, such a pleasing contrast to the deep green of other trees. Hardy, healthy and wonderfully beautiful, it should be welcomed to every home."—C. S. Harrison.

Truly nature's highest effort to produce the beautiful is embodied in these glistening Blue Spruces.

The stress of winter only adds to the beauty of the home surrounded by Evergreens

Black Hill Spruce

(*Picea Canadensis*)

Somewhat similar (and closely related) to White Spruce, but much more symmetrical, compact and bushy. Hardest of all spruces. A native of the Black Hills of South Dakota and first introduced into commercial culture by Mr. D. Hill many years ago, since which time it has been fully tested in all parts of the country and found satisfactory. Foliage varies from green to bluish tint. Found entirely satisfactory north of St. Louis and Philadelphia.

In describing to our patrons the different varieties of spruces, we wish to call particular attention to the Black Hill Spruce. The very smallest trees of this variety soon form round, sturdy, compact bodies. As the tree grows and develops it adds to this particular style of growth and in most cases is found to be the most compact growing Evergreen belonging to the spruce family.

Norway Spruce—the Christmas Tree.

Hill's Norway Spruce

(*Picea Excelsa*)

As the Norway Spruce prevails over a wide range of territory in Europe, there are naturally many sources from which to obtain seed. Our careful experiments and close study of this situation for many years has proven conclusively that seed from French and German sources are unreliable for U. S. A. conditions. The French and German seed is easily obtainable and low in price, but the really superior type of Norway Spruce exactly suited to U. S. A. conditions come from high elevations in the Swiss Alps and is always scarce and high in price. The exclusive use of this seed by us insures a really superior type of Norway Spruce exactly suited to U. S. A. conditions.

This popular Evergreen is so well known that a description is hardly necessary. It is a fast, vigorous grower that develops into a large tree.

Black Hill Spruce (*Picea Canadensis*). Makes the closest, compact growth of any spruce.
Very hardy, even in extreme north.

Austrian Pine *Pinus Austriaca* .

Austrian Pine

(*Pinus Austriaca*)

It is sometimes called Black Pine. Has rich glossy dark foliage. Well adapted for planting in cities, as it is highly resistant to smoke. Its native home is in the lower provinces of Austria and also the northern half of the Balkan Peninsula.

A fast growing, dense tree, of wonderful adaptability. For years we have secured our seeds from original sources in Austria, but since the war are now using carefully selected home-grown seed which has proven as satisfactory or even more so than the imported seed. Grows to large size under favorable conditions.

Mr. C. S. Harrison, eminent Evergreen Authority, says: "The Austrian Pine is a compact, symmetrical and sturdy tree. I see one from my window which was planted in poor soil twenty-five years ago. It is a beautiful pyramid about thirty feet tall. The lower branches touch the ground."

"Along the sky in wavy lines,
O'er isle and reach and bay,
Green belted with eternal Pines,
The mountains stretch away."

Single Stem Mountain Pine

(*Pinus Montana Uncinata*)

Semi-Dwarf

An upright form of the Mountain Pine found growing naturally in Mountains of Italy, also abundant in the Spanish Mountains. It differs from the Mugho Pine in that it has a main stem, or leader, which predominates the tree; the outer branches growing closely up around it in successive lengths, forming a compact, conical-shaped Pine, broad at the base and tapering at the top.

Grows to a moderate size. Foliage is rich deep green; very attractive.

Price, Extra Selected Specimens, Balled and Burlapped.

Single Stem Mountain Pine
(*Pinus Montana Uncinata*)

Swiss Stone Pine (*Pinus Cembra*)

Swiss Stone Pine

(*Pinus Cembra*)

One of the most interesting of pines producing edible seeds or nuts. Its growth is slow, rarely exceeding one foot each season. It requires but little room and is always well furnished with foliage. Formerly grew over a wide area of both Europe and Asia. *Pinus Cembra* was cultivated by the Duke of Argyll in 1746 and is thence supposed to have been introduced by him.

Limited space is no bar to the possibilities of Evergreens; even a city lot offers opportunities for beautiful surroundings

Imagine this home without Evergreens. Would not its exterior be so much bricks and mortar?

Dwarf Mountain Pine (*Pinus Mugo*). Makes a dense low growth and is therefore ideal in situations like the above.

Hill's Dwarf Mountain Pine

(*Pinus Mugho Compacta*)

True Dwarf Form

Hill's Dwarf Mountain Pine is a strain of *Pinus Mugho*, which we have developed through years of type selection, being a genuine true dwarf grower, many stemmed, compact, with good dark green color, which it retains throughout the winter.

Many inferior forms of this variety offered as *Pinus Mugho*, are on the market, some of which are loose, open growers and some of upright, irregular habit. The strain we offer is the true dwarf, compact type, and the seed (from Riesenbirge Range of Silesia), is obtainable only at great expense in small quantity, because of its scarcity. When obtainable, the true seed costs as high as \$15.00 per pound, in contrast to \$1.50 per pound for the common form. Matured trees rarely grow over 3 to 6 feet high and can be kept lower by annual shearing.

Some specimens take a creeping form, the branches lying flat on the ground and in all the plants there is a density of growth not found in any other offerings on the market.

†B&B signifies Balled and Burlapped.

NOTE.—The Dwarf Mountain Pine exhibits some remarkable phenomena incident to the high altitude at which it grows. The following account of it as seen on the Tyrolese Alps is taken from Kerner's "Natural History of Plants."

"On the slopes of the mountains, the growing end of the stem is always directed towards the valley. The boughs and twigs which curve upwards from the main stems are exceedingly elastic and when pressed down stretch themselves along the ground. (In many clumps of Dwarf Mountain Pine, the numerous boughs are so thickly crowded and so closely interwoven that progress through them is impossible. The extensive tracts are therefore avoided and left alone, and many of them have never been penetrated by the foot of man during their whole existence). Many branches, which in summer stand more than a yard above the ground, lie in the winter directly on the soil on account of the snow pressure. When the snow melts in the following spring and the branches are gradually lightened, they rise up again in consequence of their extraordinary elasticity and resume that position which they occupied in the preceding summer. In the summer, the old leaves on the ends of the pine branches which wave above the ground more than a yard high, may be frequently seen plastered over with earth and small stones, and any one knowing nothing of the process above described would not easily understand how these small stones came to be found in these situations. As a matter of fact, the soil on which the branches lie through the winter, moistened by the snow-water, forms the adhesive agent which is so efficient, that stones more than half an inch in diameter are attached by it to the old tufts of leaves.

The Dwarf Mountain Pine was in cultivation in Great Britain prior to 1779 at which date plants were growing in the garden of Mr. John Blackburn, at Orford Hall, near Warrington."

Genuine, true type Hill's Dwarf Mountain Pine showing new season's growth.

White Pine

(*Pinus Strobus*)

King of the Forest

The White Pine is the largest of all conifers indigenous to the eastern part of the United States. The crowns of mature White Pines in mixed forests conspicuously overtop the surrounding hardwoods. The northern boundary of its natural range is from Newfoundland west to eastern Manitoba. Through the lake region the range extends west to eastern Minnesota and south to northern Iowa, Indiana, Illinois and Ohio.

It readily adapts itself to both dry and moist soils, for it is found on the poorest and driest sand, and on steep, rocky slopes, and also on moist clay flats and river bottoms. White Pine can endure considerable shade for a number of years, but as it becomes older it requires more and more light for its development.

It grows rapidly; each season's growth is plainly noticeable as shown in this picture. Has long flexible needles, whitish beneath.

NOTE: The fact has been determined by the Secretary of Agriculture that it is necessary, in order to prevent the further spread of a plant disease known as the white-pine blister rust, to prohibit the shipment of White Pine west of the west line of Minnesota, Iowa, Missouri, Arkansas and Louisiana.

Scotch Pine (*Pinus Sylvestris*). A fast grower with strong, heavy branches.

The part that Evergreens can play in home landscapes knows no limitations. Such a planting will make your every home-coming pleasant. The bright color of the new spring's growth will be a delight, while the various shades of greens and blues will give a cheerful welcome in the cold and snowy wintry days.

Japanese Yew - (*Taxus Cuspidata*). Very hardy - dark green foliage, scarlet fruits, and keeps its color throughout the winter.

The Yews

(*Taxus*)

In the old world the Yew tree is a tradition, being of geological antiquity. Its history is interwoven with the growth of civilization. The Fortingal Yew in England, 56 feet in circumference, proved by the rings of its stump that it had lived almost 3000 years. Many interesting books have been written on the history of this one genus of trees. Not all varieties of Yew will stand the rigour of our climate, but the three selected types described on this page are among the best for American gardens.

American Yew

(*Taxus Canadensis*)

A valuable dwarf Evergreen, seldom ever growing more than two or three feet above the ground. Has densely clothed dark green foliage. Particularly beautiful in autumn when loaded with scarlet colored fruits. Thrives well in shade. Can be trimmed to any desired shape. Very hardy. Sometimes called Canadian Yew. The foliage assumes a reddish tint in winter; very striking.

Price, Extra Selected Specimens, Balled and Burlapped

		Each	10
1 to 1½ feet xxx*	B&B†	\$7.25	\$67.50

Japanese Yew

(*Taxus Cuspidata*)

A distinctly valuable Yew, growing 40 to 50 feet high. Under cultivation, somewhat smaller. Has been cultivated throughout Japan from time immemorial, and introduced into America many years ago, having taken its place as one of the most noteworthy and valuable on the entire list. It originated in the cold high altitudes of Northern Japan, from where we obtain our seed, and is found fully able to successfully withstand extremes of heat and cold in America. Grows close, upright and compact. Foliage dark green, fruit bright scarlet. The Arnold Arboretum reports: "This Yew is the most valuable plant which Japan has furnished our Northern States. Reported perfectly hardy in Minneapolis."

Price, Extra Selected Specimens, Balled and Burlapped

		Each	10
1 to 1½ feet xxx*	B&B†	\$ 7.25	\$67.50
1½ to 2 feet xxxx.	B&B	9.00	82.50

Dwarf Japanese Yew

(*Taxus Cuspidata Brevifolia*)

Similar to *Taxus Cuspidata* but is very dwarfish and compact growing. The foliage consists of little bunches of black green foliage. Of irregular and picturesque outline, ultimately becoming 2 to 3 feet high and 5 or more feet wide. Absolutely hardy. It retains its rich dark green color, entirely throughout the winter, which added to its other points of superiority, makes it one of the most valuable Yews. On a visit of Professor Sargent, Director of the Arnold Arboretum, at Jamaica Plain, Massachusetts, to our nurseries in 1915, he was greatly impressed with the fine appearance of our stock of this valuable variety, and mentioned especially about its absolute hardiness and adaptability to all American conditions, also the probability of its great popularity.

†B&B signifies Balled and Burlapped.

American Yew (*Taxus Canadensis*). Don't forget the Yew for a shady corner—it will do well there.

A little colony of American Arbor Vitae nestled among the Pines and Spruces.

American Arbor Vitae

(*Thuya Occidentalis*)

“White Cedar”

Trees of this genus are of ancient origin, representatives of *Thuya Occidentalis*, having existed throughout the northern hemisphere, in early periods of the earth's history. Its introduction into American Gardens took place at the beginning of landscape development in America. It was probably the first American coniferous tree cultivated in Great Britain; being introduced prior to 1597 in which year it was mentioned by Gerrard in his “Historie of Plants.”

The American Arbor Vitae is the mother tree, from which upwards of fifty distinct types have been developed, varying in color from deep green to bright golden and ranging in size from little dwarfs to tall pyramidal specimens. The native forests of Arbor Vitae have long been of great commercial value for timber, producing tall straight trunks much used for telegraph poles.

Growing over such a wide range in its native growths, trees from some sections are open growing and undesirable, but we are careful to obtain our seed from certain sections of Northern Wisconsin, producing stock of absolute hardiness, good green color and compact habit of growth. The Arbor Vitae is very hardy and dependable in almost any situation. Stands trimming well, and for this reason is the most widely used of any Evergreen for hedge purposes. Complete information regarding hedges will be found on pages 54 and 55. Foliage is very soft and flexible and of fine deep green color.

Siberian Arbor Vitae *Thuja Wareana Siberica*

A miscellaneous mass planting—interesting because of the large variety—partially screening the side entrance.

Hill's Pyramidal Arbor Vitae (*Thuja Pyramidalis*). Extremely narrow habit, retaining its dark green color all winter.

Hill's Pyramidal Arbor Vitae

(*Thuya Occidentalis Pyramidalis*)

Narrow, Compact Habit

One of D. Hill's greatest triumphs in Evergreen growing has been the propagation of the Hill's Pyramidal Arbor Vitae.

Unfortunately many inferior types are on the market. Our carefully selected strain which we have improved through years of careful selection and propagation, is of noteworthy value, being the genuine narrow, pyramidal type, retaining its deep green color, summer and winter. It is an especially hardy vigorous grower, forming a compact, narrow column of dense, dark green foliage. Plants at a height of 15 feet, seldom measuring over 2 feet in diameter. Please note that our strain of Pyramidal Arbor Vitae does not turn brown, but retains its bright green color throughout the entire year.

Perhaps to the majority of planters the Pyramidal Arbor Vitae is the most familiar of all the different plants belonging to this family. It is one of the old, well-known trees, having been grown and sold for many years. There is almost no end to its use in landscaping. For markers, entrances, formal gardens and tubing, it probably is used more than any other Evergreen. It is also used in thick masses and groups to break the monotony of a continuous sky line.

We have for years taken great pride in the growing of Pyramidal Arbor Vitae, and now have the most extensive blocks of choice trees in America.

Low growing Evergreens have been extended along each side of a curved entrance path. A departure from the usual style of entrance planting, but certainly a harmonious arrangement.

Woodward's Globe Arbor Vitae

(*Thuya Woodwardi*)

Without doubt one of the best globe forms on the list. Originated and introduced by Mr. Jacob Manning, Proprietor of the Reading Nurseries, Reading, Mass., and named after his son, J. Woodward Manning. A few plants presented by the introducer shortly before his death to D. Hill forms the basis of our stock. Therefore, we can justly say that our stock is the true strain. It seldom grows over 3 to 3½ feet in diameter.

Douglas Pyramidal Arbor Vitae

(*Thuya Douglassi Pyramidalis*)

Its foliage is feathery, somewhat crested and of a good dark green color. Its habit is pyramidal, resembling the well known Pyramidal Arbor Vitae. It grows 12 to 15 feet in height. This illustration shows the unusual formation of foliage and the symmetrical outline. A comparatively new variety.

The *Arnold Arboretum* says: "As a garden plant the most valuable of them all (Arbor Vitae types) is perhaps the tall slender pyramid raised many years ago by Robert Douglas and generally known as Douglas Pyramidal Arbor Vitae. This appears to be the best substitute in Northern gardens for the Pyramidal Italian Cypress."

†B&B signifies Balled and Burlapped.

Plant Evergreens around your house foundation. Isn't a permanent planting like this better than the expensive beds of tender flowers that must be planted each spring, and then pass away with the first frost to leave the ground bare for six months?

Select Your Evergreens From This Page

For the convenience of those not so familiar with Evergreens in their different habits, we have divided the important varieties into groups: Very Dwarf, Dwarf, Medium and Tall.

TRAILING, CREEPING, OR VERY DWARF

Fine for Rockeries, Borders, Edging or Ground Covers. All Prostrate or Creeping Forms, 1 to 2 feet high at maturity, spread 8 to 15 feet in diameter.

	Page		Page
Juniperus Canadensis.....	18	Juniperus Tamariscifolia.....	20
Juniperus Canadensis Aurea.....	18	Juniperus Sabina Horizontalis.....	19
Juniperus Procumbens.....	19	Juniperus Virginalis Globosa.....	22

DWARF OR LOW GROWING VARIETIES

Excellent for Foundation Plantings, Low Groups, Terraces, and Conifer Beds. Splendid where permanent effects are wanted without obstructing the view. Average height, 4 to 6 feet at maturity.

	Page		Page
Juniperus Pfitzeriana.....	22	Thuya Occidentalis (Globes).....	41
Juniperus Sabina.....	22	Thuya Douglassi Aurea.....	46

Pinus Tanyosha.....	36	Thuya Wareana Siberica.....	42
Taxus Canadensis.....	39	Thuya Woodwardi.....	46
Taxus Cuspidata Brevifolia.....	39		

MEDIUM HEIGHT VARIETIES

Excellent for borders to add contrast to flowering shrubs. Fine for corners to give accent and add height to plantings of creeping or low growing Evergreens. Good for sentinels or markers at each side of entrance steps, windows, or in garden. Average height, 8 to 15 feet at maturity.

	Page		Page
Abies Balsamea.....	8	Pinus Banksiana.....	31
Abies Tsuga Canadensis.....	7	Pinus Cembra.....	32
Juniperus Counarti.....	15	Pinus Flexilis.....	32

The owner of the bed of Evergreens shown here used to spend half the price of the Evergreens each year in bedding plants and perennials—now he avoids replacing and expensive upkeep and enjoys the year around beauty of Evergreens.

These grotesque and novel shapes (styled Topiary work) in Evergreens were trained in the Italian Garden on the Humewell Estate, Wellesley, Massachusetts.

EVERGREEN WINDBREAKS

The comforting influence of an Evergreen windbreak can scarcely be realized unless you have stepped behind a row of sturdy Evergreens on a blustering winter's day. In farming sections especially in the prairie states, the Evergreen windbreak has long been recognized as an important factor in protecting the home, stock and buildings. We have a special catalog with many suggestions and illustrations in regard to Evergreen windbreaks. Should you be unable to reach a decision in regard to your windbreak needs from information contained here, we will gladly send you a copy of our special windbreak catalog on request.

If you are interested in farm property you will find an Evergreen windbreak a wonderful investment. We have in our files letters from farm owners all over the country testifying they have received one to five thousand dollars more for their farms when planted with the Hill Evergreen Windbreaks.

Any farm or home exposed to winds will find Evergreen windbreaks a remarkable source of comfort.

How to Build Evergreen Windbreaks

There are three best ways to build an Evergreen Windbreak. The same results are accomplished with each method; the only difference is in the time it takes. You will not be disappointed in any of these planting arrangements. Just look over the plans submitted and choose the plan best suited to your needs.

PLAN NO. 1

Plant 10 feet apart

Results in Only Six Years' Time

A popular and economical plan is to space the trees 10 feet apart in a single row, which gives a windbreak in six years' time. This spacing gives the correct amount of room for the trees to develop. At the end of six years the branches will touch, and no thinning will ever be required. On this basis figure 100 trees to each 1000 feet.

PLAN NO. 2

Plant 5 feet apart

Results in Only Four Years' Time

If you desire quicker results, space the trees 5 feet apart in a single row. At the end of five years take out every other tree and plant elsewhere. After this no further thinning will be required. On this basis 100 trees will plant 500 feet.

PLAN NO. 3

Plant 2½ feet apart

Results in Two Years' Time

Where almost immediate results are wanted, space the trees in a single row, 2½ feet apart. This gives a Windbreak in the shortest possible space of time. At the end of three years take out every other tree, leaving trees 5 feet apart. After four years more, thin trees to 10 feet apart. After this no further thinning will be required. On this basis figure 100 trees to each 250 feet.

Evergreens give protection in winter, the time when most needed.

The Farm Home before it was given the protection of a Hill's Evergreen Windbreak—The whim of the Blizzard Winds—Bleak—"Cold as an abandoned barn."

PRICES

Windbreak Evergreens

Price: Twice Transplanted—Twice Root-Pruned Stock

			25	50	75	100
Medium Size, 10	to 12	inch.....	\$ 9.00	\$17.50	\$25.00	\$32.50
Large Size, 1	to 1½	feet.....	10.50	20.00	29.50	38.00
Extra Large, 1½	to 2	feet.....	15.00	29.00	42.50	56.00
Super Size, 2	to 3	feet.....	19.50	38.50	57.00	75.00

Varieties

Norway Spruce is the variety generally used, although any of the following varieties make excellent windbreaks.

Red Cedar
Scotch Pine
White Pine

Colorado Douglas Fir
Ponderosa Pine

NOTE: These trees are not dug with earth ball or burlapped, but are packed in damp moss, so they reach you in excellent planting condition. Do not confuse these trees with specimens (balled and burlapped) Evergreens, as they are grown in quantities for windbreak purposes.

The same Farm Home after given the blanket-like protection of a Hill's Evergreen Windbreak—Warm—Free from sweep of Wind—worth hundreds of dollars more to owner—or buyer.

Evergreen Hedges serve a practical as well as ornamental value.
They make a barrier equal to a tight wire fence.

Hill's Evergreen Hedges

Attractive, Durable, Inexpensive

The wide variety of uses an Evergreen hedge will serve on your grounds is almost without end. The various shapes and sizes into which an Evergreen hedge may be trimmed makes it possible to grow a hedge in almost any situation. It will be found that an Arbor Vitae hedge is just as effective in keeping out intruders as a fence. The branches soon form an almost impenetrable barrier.

Varieties to Use

Evergreens with soft, flexible foliage make the best hedges. The Hemlock, various Junipers and the Arbor Vitae are the most satisfactory among the Evergreens. In most situations the American Arbor Vitae forms the best hedge, although other varieties, such as the Hemlock, shown on page 7, can be sheared into beautiful hedges. Where a hedge is desired for immediate effect the specimen sizes can be used. See sizes and prices of large trees on page 41. Where an economical hedge is wanted, we recommend American Arbor Vitae offered below.

Planting and Cultural Care

Smaller sized Arbor Vitae one to three feet such as those offered below ought to be planted about one foot apart. Such an arrangement provides plenty of room for development and still gives the hedge a compact appearance right from the start. In trimming the hedge, the item of first importance is to see that the bottom part has access to air and sunlight. In other words trim in an oval shape or in some manner so that the bottom of the hedge is wider and tapers toward the top.

American Arbor Vitae

(*Thuja Occidentalis*)

The National Hedge of America

What the Yew hedges are to old English gardens the Arbor Vitae is to America. It forms a most beautiful, compact hedge in a remarkably short time. Its superiority over deciduous (leaf bearing) hedges lies in its deep green color all seasons and the fact it can be kept at any desired height or form. This point is easily seen by comparing the three foot hedge shown on this page and the 8 or 10 foot wall pictured on page 55.

Price

		25	50	75	100

*Each x indicates one transplanting.

If interested in larger trees for immediate effects, turn to page 41 for sizes and prices.

The great value of American Arbor Vitae lies in the dense impenetrable growth, its excellent green color and ready response to shearing. Such a hedge can be grown in only a few seasons with American Arbor Vitae.

"There are delights," says a writer of ancient times, "that will fetch the world around from sun to sun, and rock the tedious year as in a delightful dream." One best of these delights is found in a garden.

There has been a widespread interest in Forestry and Woodlot planting and an enormously increased demand for our valuable native timber trees. We have made a specialty of growing this class of stock for many years and have an immense supply always on hand. All are strong, healthy and well rooted, freshly dug, plainly labeled and tied twice in bundles of fifty.

Fifty of same variety and size at 100 rate; 500 of same variety and size at 1000 rate.

Orders for Seedlings must call for at least 50 of any one variety and size.

The Hill Nursery, growers of forestry trees since 1855, maintain the largest Evergreen propagation nursery in America. Our years of experience in growing, packing and handling leave their distinct mark of superiority on every shipment that leaves our nursery. If you have any problems to handle in connection with your forestation or reforestation, our advice is free for the asking.

What Shall We Do About It?

(From American Forestry)

"The original forestry area of the United States was 850 million acres. There now remains in virgin timber about 230 million acres, about one-fourth the original area. Our total present acreage of forest and cut-over lands is about 500 million acres. One hundred million acres of this is waste land which produces nothing and 180 million acres more contain more or less second-growth timber. A large percentage of this second growth timber is of inferior quality. The new growth of timber is not more than one-third of the amount which is being used or destroyed each year."

City residences need not be deprived of Evergreens. Window boxes like these can be used in almost every home.

One of the many uses of Hill's Hardy Evergreens

Hill's Evergreens for Window Boxes

See to it, during the winter months, that your window-boxes, urns, etc., are filled with hardy Evergreens, just as you see to it that Geraniums and Vincas are there for Decoration Day. A window-box planted with growing Evergreens of different varieties and colors will add much to the appearance of the porch, windows or any room in the house. For winter decoration, Hill's Hardy Evergreens are indispensable. The charming foliage effects and rare fragrance of Evergreens are remarkable, adding color, warmth and cheerfulness, while their rugged hardness permits outdoor or indoor use all the year around.

Thuya (Globe)

Red Cedar

Hill's Evergreens for Tubbing

Clipped Specimens, Bushy Trees

Hill's Evergreens for tubbing stand at the head of the list of hardy plants suitable for outside decoration, both summer and winter. They are easily moved from place to place, require little attention, are always green and are never injured by continued cold or freezing.

Can be used in hallways, entrances, balconies or sun parlors and will remain a permanent decoration wherever placed. In summer or winter they attractively add to their surroundings.

Your selection is not limited. The varieties listed below will be ample for your requirements.

Hill's Pyramidal Arbor Vitae

Close growing, rich dark green foliage. Excellent substitute for boxwood.

	Each	Pair
2 feet.....	\$ 5.50	\$10.00
3 feet.....	8.00	15.00
4 feet.....	10.50	20.00

Red Cedar

Beautiful dark purplish bronze color, changing to light green in spring.

	Each	Pair
3 feet.....	\$10.50	\$20.00
4 feet.....	13.00	25.00

Globe Arbor Vitae

Symmetrical, sheared globes of good dark green color.

	Each	Pair
1¼x1¼ feet.....	\$ 8.00	\$15.00
1½x1½ feet.....	10.50	20.00

Black Hill Spruce

Bluish green foliage. Stiff, sturdy branches. Can be used for Christmas tree at the holiday season.

	Each	Pair
3 feet.....	\$13.00	\$25.00

The trees will reach you with roots balled and securely tied in burlap.

We do not furnish tubs.

Pyramidal Arbor Vitae (*Thuja Pyramidalis*.) One of the most satisfactory Evergreens for tubbing.

God gave all men the earth to love, but since our hearts are small,
Ordained for each, one spot should prove beloved over all. —*Rudyard Kipling.*

Hill's Ornamental Flowering Shrubs

The beauty of shrubs lies in their beautiful flowers, highly colored berries and bark and twigs of various hues. It is our aim to produce only the useful and hardy types, worthy of general cultivation in our climate. A careful study of these short descriptions will make it possible to plan a succession of bloom from early spring until late in the fall.

Berberis Thunbergii

(Japanese Barberry)

Small foliage, bright green in color, turning to orange and red in autumn. Scarlet berries hang on the branches all winter. Valuable for low hedges. May be pruned to any form or height. Grows 4 to 6 feet high.

Price	10	100
10 to 12 inches.....	\$5.00	\$37.50
1 to 1½ feet.....	6.00	50.00

Cornus Amomum

(Silky Dogwood)

A spreading shrub with reddish purple twigs. Leaves dark green, pale or whitened beneath. Flowers creamy white, early summer. Fruit bluish white. Grows 6 to 10 feet tall.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Cornus Mascula

(Cornelian Cherry)

A large dense shrub with handsome glossy foliage. Flowers, yellow, appearing before leaves in early spring. Fruit, bright scarlet.

Price	10	100
1 to 1½ feet.....	\$6.00	\$50.00

Cornus Paniculata

(Panicked Dogwood)

A free flowering shrub with gray branches. Leaves dull green, whitened underneath. Flowers white, borne on deep red stems. Grows 6 to 10 feet tall.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Cornus Siberica

(Siberian Red Osier)

An upright shrub, with bright, blood red branches. Leaves dark green, pale underneath. Flowers creamy white in flat top clusters. Fruit light blue or bluish white.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Forsythia Intermedia

(Hybrid Golden Bell)

A tall shrub with slender arching branches. Leaves dark green and lustrous; flowers golden yellow, borne in great profusion.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Ligustrum Amurense

(Amoor River Privet—North)

Hardy. Leaves small and nearly evergreen. Valuable for hedges. Grows 8 to 12 feet tall.

Price	10	100
1½ to 2 feet.....	\$5.00	\$40.00
2 to 3 feet.....	6.00	50.00

Lonicera Morrowi

(Japanese Bush Honeysuckle)

Leaves dark green. White flowers bloom in May, followed by red fruit in August. Grows 8 to 12 feet tall.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Lonicera Tatarica

(Tatarian Honeysuckle)

Small, bright red flowers are followed by tiny attractive red or orange berries.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Weigela, Coralberry, Snowberry.

Philadelphus Coronarius

(Sweet Scented Mock Orange)

White flowers in May. Grows 10 feet tall.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Philadelphus Coronarius Grandiflora

(Large Flowering Mock Orange)

Large white flowers, May and June. Grows 8 to 12 feet tall.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Sambucus Canadensis Aurea

(Golden Elder)

Foliage a golden yellow all summer. Flowers white, followed by purplish red berries. Grows 6 to 8 feet tall.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Spirea Opulifolia

(Ninebark Spirea)

A large vigorous shrub, bearing an abundance of white flowers in flat clusters, followed by interesting seed pods.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Spirea Van Houttei

(Bridal Wreath)

Of graceful habit. Snow white flowers in panicles appear in May and June. Grows 5 to 6 feet tall.

Price	10	100
1½ to 2 feet.....	\$5.00	\$40.00
2 to 3 feet.....	6.00	50.00

Syringa Vulgaris

(Purple Lilac)

The old fashioned Lilac; lavender flowers; blooms in May. Grows 8 to 12 feet high.

Price	10	100
1½ to 2 feet.....	\$6.00	\$50.00

Philadelphus Grandiflora

Symphoricarpus Racemosus

(Snowberry)

Small pink flowers in July, followed by large white berries in the late summer and fall. Grows 4 to 5 feet high.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Symphoricarpus Rubra

(Coral Berry)

Produces a wealth of red or purplish berries, remaining on the branches all winter. Flowers greenish red in summer. Very showy in early winter.

Price	10	100
2 to 3 feet.....	\$6.00	\$50.00

Viburnum Opulus

(Highbush Cranberry)

Has flat clusters of white flowers in May, followed by red berries, which remain on bushes until late in winter. Grows 8 to 12 feet tall.

Price	10	100
1½ to 2 feet.....	\$6.00	\$50.00

Philadelphus, Barberry, Lilac

Evergreen Vines and Ground Cover

Some of the principal uses of ground cover are as follows: In rockeries, bordering walks and drives, bordering shrub and flower beds, under Evergreen and shrub plantings, in semi-shade or dense shade, or steep terraces, in cemetery plots, for winter window boxes, among stepping stones and many more. We offer only hardy tested sorts listed below.

Japanese Spurge

(*Pachysandra Terminalis*)

A splendid Evergreen ground cover with thick, glossy, green foliage, forming a dense mat, making low-growing cover plant. Excellent for edging, underplanting, etc. Does well in dense shade where grass will not grow. Keeps its leaves all winter and is very hardy. Grows 6 to 9 inches tall and spreads along the ground.

Price, Strong Plants

	25	50	100
4 to 6 inch (transplanted).....	\$4.50	\$8.00	\$15.00
6 to 8 inch (transplanted).....	5.25	9.50	18.00

Evonymus Radicans Vegetus

This is an Evergreen vine that has no rival among all vines, either Evergreen or Deciduous. In late fall and winter it produces an abundance of showy red fruit and yellow pods. By means of aerial rootlets it clings closely to brick or stone walls; soon makes a good covering. The growth is rapid.

Price, Strong Plants

	10	25	50	100
10 to 12 inch (transplanted).....	\$4.00	\$8.25	\$15.50	\$30.00

Evonymus Radicans Acutus

Distinguished on account of its sharp-pointed leaves. A very attractive hardy Evergreen vine; our stock is extra choice.

Price, Strong Plants

	10	25	50	100
12 to 15 inch (transplanted).....	\$3.00	\$7.00	\$13.00	\$25.00

Japanese Spurge (*Pachysandra Terminalis*). Stays green all winter and is perfectly hardy. The plant in corner is Japanese Barberry.

The Home of Hill's Evergreens

Here is shown our complete nursery establishment, consisting of nurseries, office, packing sheds, stables, box-making plant, storage, boarding house, greenhouses, and tree seed cleaning establishment.

All modernly equipped and maintained for the handling of your orders in the most prompt and efficient manner. The fields of growing stock contain the most complete line of Choice Specimen Evergreens in America. Our over sixty years' experience in the digging, packing and shipping of Evergreens is your guarantee of complete satisfaction and a square deal.

THE D. HILL NURSERY CO., Inc.

EVERGREEN SPECIALISTS—LARGEST GROWERS IN AMERICA

DUNDEE, ILLINOIS

A Word of Appreciation

We wish here to express sincere thanks to our many friends and patrons who have written kind words relative to the quality of stock and treatment they have received from us the past season. We greatly appreciate these expressions of confidence and shall endeavor to maintain the reputation they have so kindly given us.

Hill Quality

The name of D. Hill has come to be synonymous with "High Quality" in Evergreens. Over half a century of conscientious effort, unbounded enthusiasm, a close study of the value of every new specie introduced; and above all, an ambition to make new friends and keep the old, has been the method by which this high position has been reached.

Your Success With Our Stock

is a matter in which we are mightily interested. Therefore, we endeavor to do everything reasonable within our power to help you succeed with the stock we send you, because we love trees and want you to enjoy them also. No firm is more careful in filling orders; we use every reasonable means to learn the customer's wishes without delaying the shipment. Your interests are our interests and we present you this 1922 catalog, confident that we merit your trade, and assure you of the best treatment, whether the order is large or small.

Special Offer No. 100 Hill's Dwarf Mountain Pine

(*Pinus Mugho Compacta*)

1 to 1½ feet

Balled and Burlapped

\$3.25 Each

Truly a sensational triumph in Evergreen growing. It excites the wonder and admiration of all. The Hill strain, which we have developed through years of type selection is a low, close, compact grower, having many stems and is of excellent green color. The branches in the spring tipped with the new growth, closely resemble tiny candlesticks over the entire tree.

It should be in every lawn or garden of every lover of beautiful Evergreens. Described by an eminent horticulturist as a "marvel of rich beauty." It grows to perfection in all parts of the country and is absolutely hardy.

Thousands took advantage of this wonderful offer last season and many expressed great surprise at the magnificence of the tree. The illustration shows the tree dug with ball of earth and burlapped ready to box and ship to you.

As our friends become acquainted with it they join us in admiration of its exquisite form and delicate beauty.

Hill's Dwarf Mountain Pine
(*Pinus Mugho Compacta*)

Business Terms

PRICES. Prices in this catalog are F. O. B. Dundee, Illinois. There are no charges for packing or delivery to the railroad station. This catalog cancels all previous catalogs and price lists. Prices are subject to change without notice.

TERMS. Cash should accompany orders from all unknown customers. Charge account service will be extended to those who furnish satisfactory references.

RATES. Five trees of same variety and size will be furnished at 10 rate, 50 of same variety and size at 100 rate.

OUR RESPONSIBILITY. We exercise the greatest care to have all stock genuine and reliable and hold ourselves prepared to replace on proper proof all that proves untrue. In case of any error on our part, it is mutually agreed between the purchaser and ourselves, that we shall not at any time be held responsible for a greater amount than the original price of goods.

GUARANTEE. We guarantee that all Evergreens purchased from us will reach you safely and in good condition, be found true to name and prove entirely satisfactory or we cheerfully refund money paid.

ADJUSTMENTS. Any errors or omissions in execution of orders will be satisfactorily adjusted if we are notified immediately upon receipt of goods.

OUR SHIPPING FACILITIES. On account of our close proximity to Chicago (the great railway center), we have direct access to all the leading railroads. In most cases specimen Evergreens dug with solid earth balls are shipped by freight.

Your Correspondence is Invited

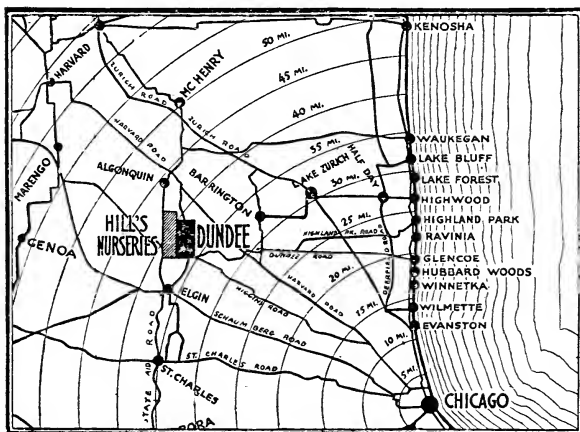

How to Reach Our Nursery

Visitors are always welcome. We are conveniently located only 42 miles northwest of Chicago.

When coming by the way of Chicago, you are directed to the C. & N. W. Depot on Madison Street, from where it is an interesting ride of one hour and thirty minutes direct to Dundee.

For an hourly service from Chicago, take the A., E. & C. Electric Line at Wells Street and Jackson Boulevard, direct to Elgin, transferring to the Dundee-Carpentersville car, getting off at Stop No. 4, from where it is but a two-minute walk direct to our office, which is located right on the nursery grounds.

Paved Road from Chicago brings you Direct to Our Nursery
